

CENTER OF THE UNIVERSITY AND SCHOOL OF MILAN FOR BIOSCIENCE EDUCATION

Cus-Mi-Bio (Center of the University and School of Milan for Bioscience education) is a centre of the University of Milan (Italy) specifically dedicated to science education for High Schools. Cus-Mi-Bio activities are directed toward two players: High School teachers (through their participation to continuous education for scientific and cultural updating) and High School students (through hands-on lab activities to improve their interest and motivation in biosciences and their biotechnological applications).

Cus-Mi-Bio works in close collaboration with the Educational School Office of Lombardy [a big public institution coordinating all public High Schools in Lombardy (about 1.000 schools, over 1.500 life science teachers and more than 300.000 students)].

Since its foundation in 2004, more than 500 high school teachers and 11.000 students attended Cus-Mi-Bio activities.
